Paper 1, Question 1

escribe **two** features of Casualty Clearing
ations.   **(4 marks)**

Average answer

asualty Clearing Stations were as close as possible to the frontline.
e wounded were divided into three groups in the Casualty Clearing
ations.

The answer has identified two features,
but with no supporting information.

Verdict

his is an average answer because two valid features are given, but there is no supporting information.
se the feedback to rewrite this answer, making as many improvements as you can.

Strong answer

asualty Clearing Stations needed to be close enough to the
rontline to be able to deal quickly with the wounded, but far
nough away to have some protection from shelling.
 triage system was used to divide the wounded into groups in
e clearing stations. Those who were not likely to survive would
ly be made comfortable, but not treated.

The answer has identified two features
and describes them in more detail. The
location of the Casualty Clearing Stations
is described very clearly. The system of
sorting patients is given its technical
name and an example of one group is
described.

Verdict

his is a strong answer because it gives two clear features of Casualty Clearing Stations
nd gives extra detail to make the descriptions more precise.
